

# Simple Treasury Policy

## Purpose

The treasury exists to fund platform growth, maintain operational stability, and support healthy utility token usage. It is not a personal wallet.

## Sources of Treasury Funds

- Utility token activity (liquidity pool paired asset)
- Platform revenue (education, tools, services)
- Grants or partnerships

**OG tokens are not sold or used for expenses.**

## Allocation Rules (Applied Monthly)

- **50%** Platform Growth – development, hosting, education, tools, infrastructure
- **25%** Utility Token Support – buybacks, burns, or liquidity support (one action per cycle)
- **15%** Operating Buffer – emergency and runway reserve (3–6 months target)
- **10%** Founder Compensation (optional) – modest stipend only if platform is active and stable

## OG Token Rule

OG tokens represent governance and long-term leverage. They remain untouched unless unlocked through a formal future governance decision.

## Emergency Brake

If volatility, hype, or pressure occurs, all treasury actions pause for 72 hours before reassessment.

## Founder Reminder

The treasury is fuel, not a reward. Strengthen the system first; wealth follows structure.
